Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

- 6) ☐ Other: ____.

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I Figs 1-3 in the reply filed on December 15, 2006 is acknowledged. Claims 4, 5, 7, 9-12, and 17-21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim.

Drawings

2. The drawings were received on May 3, 2004. These drawings are approved.

Specification

3. The disclosure is objected to because of the following informalities: On page 8 line 1, "44" should be --34--. Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 2, 3, and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites the limitation "said rotatable member " in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claims 3 and 8 recites the limitation "said second actuator" in lines 1 and 2, respectively. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-3, 6, 8, and 13-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Salvagnini (US 4,843,862).

Salvagnini discloses a rotary cam assembly comprising: a rotary cam (9) movable between a bending and a released position; a first actuator (10) for moving said rotary cam between said bending position and said released position; a failsafe device (22) for ensuring proper position of said rotary cam, said failsafe element comprising a rotatable element (17) supported between first and second arms (14), and an actuator applying force directly to said rotatable element for moving said rotary cam to a desired position (see Fig 1).

Re claim 2, said actuator comprises a cam surface (23) engageable with said rotatable element.

Re claim 3, said actuator comprises a hydraulic cylinder (see Fig 1).

Re claim 6, said rotatable element comprises a roller supported on a shaft (19), said shaft supported at distal ends by said first and second arms (14).

Re claim 8, said rotatable element comprises a block (see Fig 1) with a heel surface (see Fig 1) for engaging said second actuator.

Re claim 13, a rotary cam (9) movable between bending and released positions; a first actuator (10) for moving said rotary cam between bending and engaged positions; and a second actuator (20) biasing said rotary cam toward said engaged position for ensuring said rotary cam moves to said engaged position regardless of a condition of said first actuator.

Re claim 14, first and second arms (unnumbered arms attached at 9) attached for rotation with said cam (9), and a rotatable element (17) supported between said first and second arms.

Re claim 15, said second actuator (20) applies a biasing force directly to said rotatable element (see Fig 1).

Re claim 16, a pivot pin (19) supporting said rotatable element between said actuator and said first and second arms (see Fig 1).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
